SuperEasy Live Defrag Crack + PC/Windows 2022 [New]

SuperEasy Live Defrag is a professional application designed to defragment your disk drives. The defragmentation process makes applications run faster and enhances the general performance of your computer. Having a cleaned-up hard disk drive means, for example, that applications run faster and the copying of files as well as the opening of photos, videos, media and documents is considerable accelerated. In spite of the fact that the defragmentation operation is fully automated, you will be happy to learn that the entire task stops if the app detects that a specific application you are running needs more system resources. The results are displayed with color codes so that you have an overall idea about the status of your hard drive. Similarly to other tools, the red color indicates that the HDD or SDD is badly fragmented and consequentially, more likely to lead to errors. The yellow colors shows the good parts of the drive, whereas the green ones the free space remaining. The program does not come with complex settings and does not require configurations. On the other hand, it allows you to schedule defragmentation tasks, which can be performed during the night or the times when you are not using the computer.
